

TREANA |

CABERNET SAUVIGNON

SUN

An abundance of sunshine during the growing season attributes warmth and idyllic growing conditions for growing wine grapes

SEA

The Pacific Ocean sends cooling breezes in the late afternoons, causing large diurnal temperature shifts and preserving natural acidity in the grapes

SOIL

The Central Coast of California is home to some of the most unique and diverse soil types of any growing region in California

EDITORS' CHOICE
WINEENTHUSIAST
DECEMBER 2019

Aromas of black cherry, caramel sauce, dried herbs and crushed rocks lead into a palate shaped by strong yet relenting tannins. Flavors of oak and more dark cherry ride a silky mouthfeel.

- The diversity of soil types and microclimates in Paso Robles create near perfect growing conditions for Cabernet
- Growing season range from 93° F during the day, down to 54° F at night.
- Vineyards in the Creston District develop thicker skins attributing structure and intensity
- Estrella District vineyards attribute bright, rich fruit characteristics
